NEGRONI

N1 // 1:1:1

This classic ratio is perfect for bolder and more juniper-forward gins because the gin is either big enough to hold its own, or force its companions into line.

N2 // 1½:1:1

This ratio suits citrus gins (and some others). The key here is that freshness and top notes have been retained and boosted.

N3 // 2:1:½

A ratio that's a deal for spicier/herbal gins whose mid-palate bite is the key to character. Here, the Campari's volume needs to be turned down otherwise its own spice and bitterness causes a clash.

N4 // 2:1:1

A mix for the light, floral group, with the gin element upped. While it may seem counterintuitive to increase the Campari, its top notes add to the balance.
